

Meeting Minutes – 13 May 2026

Platform: Online (Teams)

Date: 13 May 2026

Time: 17:02

Attendees

- Phelelani
 - Yusra
 - Keanu
 - Mika
-

Discussion Points

1. PWA Demonstration

- Phelelani demonstrated the Progressive Web App (PWA) implementation for CampusBites
 - Team confirmed:
 - The platform can now be installed on desktop and mobile devices
 - The current PWA icon uses a temporary placeholder logo
 - Final branding assets and logos will replace the placeholders later
 - Team discussed clearing browser cache after updates to ensure the newest PWA version appears correctly
-

2. Navigation Bar Consistency

- Team reviewed the updated navigation bar implementation across all pages
- Navigation was structured according to user roles:
 - Guests can only access:
 - Home
 - Browse
 - Vendor Profiles

- Customers can access:
 - Orders
 - Profiles
 - Vendors can access:
 - Dashboard
 - Store Settings
 - Team agreed consistent navigation significantly improved usability and professionalism
-

3. File Naming & Structure Improvements

- Team discussed renaming confusing HTML files for clarity and easier marking
 - Proposed renaming:
 - checkout.html → customer-orders.html
 - orders.html → vendor-orders.html
 - Team acknowledged restructuring folders entirely would require too many code changes at this stage
 - Agreed that selective renaming was safer and more manageable
-

4. Vendor Profile Improvements

- Team discussed expanding vendor profile functionality to include:
 - Store logos
 - Vendor slogans/descriptions
 - Store categories/cuisines
 - Profile-picture management
- Vendor profiles would also later include:
 - Customer reviews
 - Vendor ratings
- Team agreed review functionality should only become available after an order is completed

5. Reviews & Ratings System

- Team discussed implementing vendor reviews and ratings similar to food-delivery platforms
- Planned functionality:
 - Customers can leave reviews after completed orders only
 - Reviews will appear at the bottom of vendor profiles
 - Vendor cards may later display summarized ratings

6. Navigation Modernization

- Yusra suggested modernizing the navigation bar using a profile icon/dropdown system similar to GitHub and Uber
- Proposed features included:
 - Profile icon in the top-right corner
 - Dropdown menu containing:
 - Account/profile access
 - Logout functionality
 - User-specific actions
- Team agreed this would:
 - Reduce navbar clutter
 - Improve mobile responsiveness
 - Make the platform feel more modern

7. Mobile Navigation Planning

- Team discussed mobile responsiveness improvements for navigation
- Planned mobile design:
 - Collapsed hamburger-menu layout
 - Three-line menu icon
 - Dropdown navigation links for smaller screens

- Team agreed this would improve usability on mobile devices
-

8. Tutorial / Onboarding Feature

- Team discussed the possibility of implementing a guided tutorial for first-time users
 - Proposed functionality:
 - Pop-up walkthrough explaining navigation and platform features
 - Page-by-page onboarding guidance
 - Team acknowledged:
 - The feature would improve usability
 - Full implementation might require too much development time before submission
 - Decision postponed pending sprint progress
-

9. GitHub Issues & Sprint Workload

- Team reviewed the increasing number of GitHub issues and pull requests
 - Yusra noted concern regarding the growing issue backlog
 - Team discussed:
 - Closing completed issues more consistently
 - Refining user stories rather than creating duplicate pages/features
 - Team agreed many remaining issues were smaller refinements rather than major features
-

10. Customer Order History Refinement

- Team discussed improving customer order history functionality
- Decision:
 - Do not create a separate order-history page
 - Instead add filters and sorting functionality to the completed-orders section

- Planned filters included:
 - Date
 - Vendor
 - Total price
 - Team agreed filters would reduce clutter while keeping the UI simple
-

11. Vendor Order Management

- Team discussed refreshing vendor order-management pages daily to avoid clutter
 - Proposed functionality:
 - Completed vendor orders move into archived order history
 - Current order page remains focused on active orders
 - Team agreed this would improve vendor usability and order organization
-

12. Analytics Export Functionality

- Team discussed export functionality for vendor analytics
 - Planned exports:
 - PDF reports
 - CSV reports
 - Existing admin analytics export functionality would be reused for vendor analytics
 - Export workflow planned:
 - Select date range
 - Generate report
 - Export as PDF or CSV
-

13. Priority Board Planning

- Team acknowledged they forgot to review the sprint priority board during the meeting

- Agreed to revisit:
 - P0/P1/P2 prioritization
 - Remaining issues
 - Notification feature ownership during the next meeting
-

14. Notifications & Recommended Vendors

- Team discussed renaming “Order Tracking” issues to “Notifications” for clarity
 - Planned notifications included:
 - Order updates
 - Status changes
 - Vendor/customer alerts
 - Team also discussed implementing recommended vendors on the customer dashboard based on previous customer activity
-

15. UI Colors & Branding

- Team discussed improving the platform’s food-oriented appearance after receiving feedback that the UI appeared too “medical”
 - Yusra proposed introducing orange accents alongside the existing purple and white theme
 - Team discussed taking inspiration from food brands such as:
 - McDonald’s
 - Nando’s
 - Steers
 - Team agreed brighter colours could improve the platform’s food-delivery identity and overall user appeal
-

16. Deployment & Payment Discussions

- Team confirmed Vercel deployment was approved for use

- Payment-system limitations were discussed:
 - Payments currently fail on GitHub-hosted versions
 - Payment integration only works correctly on approved deployed domains
 - Team agreed final demonstrations should use the deployed Vercel version
-

17. Sprint Completion Planning

- Team agreed on internal deadlines:
 - Friday/Saturday:
 - Most development work completed
 - Sunday:
 - Final refinements
 - Touch-ups
 - Practice runs
 - Monday:
 - Final presentation readiness
 - Team also discussed future support for:
 - Light mode
 - Dark mode themes
-

Decisions Made

- Navigation bar will remain role-based and consistent across pages
 - Customer order history will use filters instead of a separate page
 - Vendor reviews will only be available after completed orders
 - Modern profile-icon dropdown navigation will be implemented
 - Vendor analytics will support PDF and CSV export
 - Orange accent colours will be explored to improve branding
 - Final demonstrations will use the Vercel deployment
-

Next Steps

- Implement profile-icon dropdown navigation
- Add filters to completed customer orders
- Continue vendor-profile and review-system implementation
- Add analytics export functionality
- Continue PWA testing and refinement
- Review sprint priority board during the next meeting
- Finalize branding and logo concepts
- Continue notification-system planning
