

Meeting Minutes – 17 May 2026

Platform: Online (Teams)

Date: 17 May 2026

Time: 17:04

Attendees

- Phelelani
 - Keanu
 - Yusra
 - Mika
-

Discussion Points

1. Vendor Order Workflow & Cash Payments

- Team reviewed the vendor order-management workflow for cash payments
 - Current workflow:
 - Vendor receives incoming order
 - Vendor confirms payment received
 - Order can then move to “Collected” status
 - Team agreed vendors should not be able to mark orders as collected before payment confirmation
 - Keanu demonstrated the updated cash-payment workflow and vendor-order management system
-

2. Navigation & UI Refinements

- Team reviewed the updated homepage and navigation-bar design
- Phelelani noted additional refinements were still required for:
 - Navigation consistency
 - Mobile responsiveness
 - Loading behavior across pages

- Team agreed the redesigned homepage significantly improved the visual appearance of the platform
-

3. Email Verification Feature

- Yusra confirmed email-verification functionality was completed
 - Remaining work:
 - Writing test files for the feature
 - Additional UI refinements for related pages
 - Team discussed how the verification flow works:
 - User registers
 - Verification email is sent
 - User verifies account through email link
 - User logs in afterward
 - Team observed that verification emails frequently appeared inside spam folders due to Firebase email limitations
-

4. Browse Page UI Issues

- Yusra reported layout issues on the browse page:
 - Product cards stretching incorrectly
 - “View Card” buttons shifting unexpectedly
 - Responsive-layout inconsistencies
 - Team discussed postponing browse-page refinements until after simpler pages were finalized
 - Mika offered assistance investigating the UI issue
-

5. Shared CSS File Discussion

- Team discussed improving UI consistency using a shared CSS stylesheet
- Proposed approach:
 - Create one reusable CSS file

- Link the file across all HTML pages
 - Apply shared colors, typography, and branding styles globally
 - Team agreed this would reduce repetitive styling work and improve consistency
-

6. Sprint Presentation Planning

- Team discussed preparation for the final project presentation/demo video
 - Agreed approach:
 - Different team members demonstrate different user stories
 - Avoid repeatedly switching between customer/vendor/admin accounts during demonstrations
 - Team also discussed:
 - Recording the presentation remotely
 - Explaining functionality verbally during demonstrations
 - Using WhatsApp/online calls for coordinated recording sessions
-

7. Planned Presentation User Stories

- Team discussed likely user stories to present:
 - Admin analytics
 - Cash payments
 - Email verification
 - Vendor order history
 - Team agreed four user stories would likely be sufficient for demonstration purposes
-

8. Review Moderation Discussions

- Team identified a moderation concern:
 - Customers may leave inappropriate reviews using offensive language
- Proposed solution:
 - Admins should have the ability to delete or moderate reviews

- Team agreed review moderation would improve platform professionalism and safety
-

9. Vendor Registration & Suspension Logic

- Yusra identified an issue involving vendor registration redirects:
 - Vendors briefly access the dashboard before being redirected to the pending-approval page
 - Team discussed moving more authorization logic into login.js for smoother behavior
 - Phelelani agreed to investigate and patch the issue later
-

10. Loading Screen / Splash Screen Refinement

- Yusra proposed implementing a loading/splash screen to improve perceived performance
 - Purpose:
 - Prevent users from seeing navigation bars and UI elements loading separately
 - Team referenced previous lab implementations that used loading-screen behavior
 - Planned refinement:
 - Display logo/loading screen briefly before full page rendering
-

11. Cart Persistence Discussion

- Team discussed customer carts remaining populated after logout
 - Phelelani explained:
 - This behavior is caused by browser cache/local storage behavior
 - Similar functionality exists on major shopping platforms
 - Team agreed the behavior was acceptable for now but may later require refinement
-

12. Vendor Discovery Improvements

- Phelelani demonstrated the new multi-vendor discovery page
 - Functionality includes:
 - Viewing all vendors in one location
 - Redirecting customers to vendor-specific pages
 - Planned filtering by categories once all vendors include category data
 - Team agreed the feature significantly improved usability and vendor discoverability
-

13. Homepage & Branding Feedback

- Team reviewed the redesigned homepage UI created by Yusra
 - Feedback included:
 - Improved visual identity
 - Better branding consistency
 - More modern presentation
 - Team agreed the redesign made the platform feel significantly more professional and visually appealing
-

14. Customer & Vendor Profile Improvements

- Team reviewed profile-page functionality:
 - Customers can now update account information
 - Vendors can add:
 - Slogans
 - Categories
 - Availability schedules
 - Additional refinement discussed:
 - Customers and vendors should eventually be able to delete their accounts
-

15. Recommended Vendors Feature

- Phelelani demonstrated the personalized “Recommended Vendors” feature
 - Functionality:
 - Recommendations generated using customer order history
 - Vendors frequently ordered from appear first
 - Team confirmed the feature avoids exposing sensitive global order data
-

16. Vendor Order History

- Mika confirmed development of a vendor order-history section showing:
 - Historical vendor orders
 - Archived/completed orders
 - Team discussed adding filters for:
 - Dates
 - Vendors
 - Order history views
-

17. Testing & Jest Difficulties

- Team discussed ongoing difficulties with:
 - Writing Jest test files
 - Handling testing-related errors
 - Phelelani agreed to assist members struggling with testing implementation
-

18. Deadlines & Final Submission Planning

- Team agreed on internal deadlines:
 - Wednesday:
 - Core development finalized
 - Thursday:
 - Presentation recording

- Final testing
 - Friday:
 - Submission deadline
 - Team acknowledged university tests and assignments were increasing overall workload pressure
-

19. External Feedback (“The Bomb”)

- Team referenced additional refinement ideas that emerged from external usability feedback (“The Bomb”) including:
 - Better vendor discovery
 - Improved customer order filtering
 - Notifications when adding items to the cart
 - Cleaner order-history organization
 - Stronger UI consistency
 - Loading-screen improvements
 - Team agreed the feedback continued helping identify usability refinements before final submission
-

Decisions Made

- Vendors must confirm payment before marking orders as collected
 - Shared CSS styling will be explored for UI consistency
 - Email verification will remain part of the final presentation/demo
 - Admins should eventually moderate inappropriate reviews
 - Multi-vendor discovery page will remain part of the customer experience
 - Notifications and loading refinements remain important polish tasks
 - Presentation responsibilities will be split between team members
-

Next Steps

- Finalize notification functionality

- Continue UI refinements across all pages
- Implement shared CSS structure if feasible
- Finish vendor order-history implementation
- Assist with Jest test files
- Patch vendor registration redirect issue
- Prepare presentation/demo recordings
- Complete final sprint refinements before Wednesday
