

Code Blooded

Sprint Two

Meeting 02 - Sprint Planning

Sprint Goal:

Extend system functionality by implementing core ordering flow, enabling interaction between users and vendors, and improving platform usability through cart, browsing, and account management features.

1. Product Backlog (Initial Items)

The following features were identified:

- Browse menu page
 - Cart functionality
 - Order placement
 - Vendor menu management
 - Incoming order processing
 - Order status tracking
 - Admin vendor management
 - Password recovery
-

2. Selected Sprint Backlog Items

Feature	Priority	Reason
Browse Page	High	Core user interaction
Cart & Order Placement	High	Core system flow
Vendor Add Items	High	Enables ordering system
Incoming Orders	High	Critical vendor functionality
Order Status Updates	High	Links vendor ↔ user
Admin Vendor Management	Medium	Platform control
Forgot Password	Medium	Improves usability

3. User Stories

User Story 6: Place Order

As a user, I want to place an order so that I can purchase food.

Acceptance Criteria

Given I have items in my cart, when I checkout, then an order should be created

Given an order is placed, then I should receive confirmation

Given an order is created, then it should be stored in the database

User Story 7: Vendor Add Items

As a vendor, I want to add and manage menu items so that customers can order from me.

Acceptance Criteria

Given I add an item, then it should be saved successfully

Given a menu item is saved, then it should appear on the browse page

Given I update/delete an item, then changes should reflect in the system

User Story 8: View Incoming Orders

As a vendor, I want to view incoming orders so that I can manage them.

Acceptance Criteria

Given I am on the dashboard, when it loads, then I should see incoming orders

Given orders are displayed, then I should see details (order ID, items, quantity, status)

User Story 9: Update Order Status

As a vendor, I want to update order status so that customers know when their food is ready.

Acceptance Criteria

Given I select an order, when I update its status, then it should change

Given status is updated, then it should be visible to the user

User Story 10: Admin Vendor Management

As an admin, I want to approve or suspend vendors so that I can control access.

Acceptance Criteria

Given I view vendors, then I should see all vendor accounts

Given I approve/suspend a vendor, then their status should update

Given I am not an admin, then access should be denied

User Story 11: Forgot Password

As a user, I want to reset my password so that I can regain access.

Acceptance Criteria

Given I click forgot password, then I should be redirected

Given I enter a valid email, then a reset email should be sent

Given I enter an invalid email, then I should see an error

Given reset is successful, then I should see confirmation

4. Task Breakdown

◆ Browse Page

- Design and build browse menu UI
 - Add sidebar filters (vendor, category, price)
 - Display menu items in a responsive grid
 - Show item details (name, vendor, price, image)
 - Add “Add to Cart” buttons (UI)
-

◆ Cart & Order System

- Implement add-to-cart functionality
 - Create cart view page
 - Display selected items
 - Create order summary / checkout UI
 - Implement order submission logic
 - Store orders in database
-

◆ Vendor Menu Management

- Create UI for adding menu items (name, price, description, image)
 - Implement logic to save items to database
 - Fetch and display items dynamically
 - Implement update item status (available / sold out)
 - Implement delete item functionality
 - Ensure data persists after refresh
-

◆ Incoming Orders (Vendor)

- Create incoming orders section
 - Display order details (order ID, items, quantity, status)
-

◆ Order Status Updates

- Add status update buttons
 - Display current order status
 - Update status dynamically (e.g. preparing, ready)
-

◆ Admin Features

- Create admin dashboard
 - Display vendor accounts
 - Implement approve vendor functionality
 - Implement suspend vendor functionality
 - Update vendor status in database
 - Restrict access to admin-only features
-

◆ Password Reset

- Add forgot password link to login page
 - Create password reset page
 - Implement Firebase reset logic
 - Display success/error messages
 - Test password reset flow
-

5. Task Allocation

Member	Task
Yusra	Forgot Password feature
Phelelani	Testing
Keanu	Incoming Orders
Mika	Customer place order
Shazmeen	Update order status
Team	Integration across all features

6. Estimation & Prioritisation

- Order flow (cart → order → vendor) → **Highest priority (P0)**
 - Browse & vendor items → **High priority (P0)**
 - Admin & password reset → **Medium priority (P2)**
-

7. Definition of Done

A task is complete when:

- Feature works end-to-end
- Integrated with Firebase
- Code is pushed via PR
- Reviewed and merged
- Basic testing is completed

8. Risks & Considerations

- Firebase complexity (queries, updates)
- Difficulty testing Firebase functionality
- Code coverage requirements
- Git merge conflicts
- Communication gaps between team members
- Overlapping work on same features

9. Sprint Deliverables

By the end of Sprint 2, the team aims to deliver:

- Functional browse page
- Working cart and order system
- Vendor item management
- Incoming orders system
- Order status updates
- Admin vendor management
- Password reset functionality
