

Sprint 3

Meeting Three Minutes

Platform: Online (Teams)

Date: 23-04-2026

Time: 17:00

Attendees

- Yusra
 - Phelelani
 - Keanu
 - Mika
 - Shazmeen
-

Discussion Points

1. Daily Scrum Progress Check

- Team held daily scrum to review progress on assigned Sprint 3 tasks
 - Members shared updates on current development work
 - Some issues had not yet started, while others were already in progress
 - Reminder given to keep updating issue owners and target dates
-

2. Admin Analytics Progress

- Phelelani confirmed work had already started on admin analytics
 - Feature remains a high-priority Sprint 3 requirement
 - Analytics expected to show platform activity and management insights
-

3. For You Page / Recommendations

- Team discussed ownership of the “For You” page
 - Clarified that this would be a separate customer-facing page
 - Intended to recommend items based on previous orders or trends
 - Feature remains one of the planned Sprint 3 stories
-

4. Authentication & Logout Bugs

- Logout/sign-in buttons not syncing correctly across pages
 - In some cases logout still displayed after refresh
 - Suggested reducing logout buttons on every page
 - Alternative suggestion:
 - o Place logout inside profile/navigation menu for consistency
-

5. Social Login Buttons

- Google/Twitter/Facebook login buttons reported as not working properly
 - Need to fix implementation of social sign-in functionality
 - Yusra offered to investigate and resolve issue
-

6. Testing & Team Support

- Team reminded to request help if tests are failing
 - Members encouraged to share branches when needing assistance
 - Testing collaboration highlighted as important for coverage goals
-

7. Cart & User Feedback

- Team reviewed cart placement and visibility
 - Current location considered acceptable because it is visible
 - Improvement added:
 - o Number of items now shown next to cart button
 - Additional ideas:
 - o Animation when item added
 - o Sound effect
 - o Success notification text
-

8. Featured Vendors / Homepage

- Homepage currently shows selected vendors
- Agreed that only three vendors should be featured at once
- Possible enhancement discussed:
 - o Horizontal slider/carousel to browse all vendors
- Considered more of a Sprint 4 enhancement than core Sprint 3 task

9. Reviews & Ratings System

- Reviews discussed for menu items through Details button popup
- Popup could show:
 - o Item image
 - o Description
 - o Shop name/location
 - o Dietary/allergen info
 - o Star ratings
 - o Customer reviews
- Reviews may appear as slideshow/rotating comments
- Vendor overall rating could later be calculated from item ratings

10. Admin Moderation & Data Quality

- Concern raised about vendors uploading inaccurate names, descriptions, or images
- Discussed stronger admin moderation controls
- Possible workflow:
 - o New menu items require admin approval before appearing live
 - o Admin can suspend/remove incorrect items
 - o Admin can leave reason/comments for vendor to fix issues

11. Vendor Suspension Logic

- Instead of fully blocking vendors, team suggested hiding products while allowing dashboard access
- Vendors should still be able to edit items and correct problems
- More user-friendly than total account lockout

12. Meeting Efficiency

- Team noted daily scrum had become longer than intended
- Agreed to save some topics for later meetings
- Next scrum scheduled for same time next day

Decisions Made

- Continue admin analytics development
- Keep For You page as active Sprint 3 feature
- Fix authentication/logout sync bugs
- Improve cart feedback with item count
- Treat vendor slider as lower-priority enhancement
- Explore admin approval system for vendor menu items

Next Steps

- Continue work on assigned Sprint 3 issues
- Fix social login buttons
- Resolve logout/authentication inconsistencies
- Build customer For You page
- Continue admin analytics page
- Improve review/details popup concept
- Discuss moderation features in future meetings

Key Takeaway

This daily scrum focused on technical fixes, progress updates, and improving user experience. Core Sprint 3 features remain on track, while the team also identified valuable future enhancements such as moderation tools, review systems, and homepage vendor sliders.
