

Sprint 3

Meeting Six Minutes

Platform: Online (Teams)

Date: 28-04-2026

Time: 17:31

Attendees

- Shazmeen
 - Phelelani
 - Keanu
 - Yusra
 - Mika
-

Discussion Points

1. Requirement Change Update

- Team discussed the upcoming new requirement for Sprint 3
 - Tutor/client indicated they want to meet in person first and review current progress
 - New requirement will likely be based on what the team has already implemented
 - Team noted this means preparation for the demo is important
-

2. In-Person Meeting Preparation

- Need to decide what features to demonstrate to tutor/client
 - Team agreed to review system stability before meeting
 - Suggested showing completed features rather than unfinished complex items
 - In-person planning discussion scheduled for following day
-

3. Browse Page / View Cart Bug

- “View Cart” button reported as not working on browse page
 - Bug discovered while testing payment functionality
 - Multiple members confirmed issue exists
 - Possible cause linked to recent merges or branch conflicts
-

4. Merge Conflict Troubleshooting

- Mika reported layout/rendering problems after merging latest changes
 - Team reviewed terminal messages and conflict status
 - Suggested resetting branch, pulling fresh changes, and retrying merge
 - Previous working version restored successfully
-

5. Pull Request Coordination

- Members reminded to communicate quickly when PR conflicts happen
 - Suggested emergency discussions/messages when two people edit same files
 - Smaller PRs seen as easier to review and merge safely
-

6. Code Coverage & PR Checks

- Shazmeen reported active PR failing due to coverage threshold
 - Coverage fix in progress and later updated
 - Team continues monitoring overall coverage percentage before merges
-

7. Vendor Analytics Progress

- Yusra completed most vendor analytics work
 - Only remaining issue involved missing createdAt timestamps on older orders
 - Analytics page includes date filtering features
 - Link from vendor dashboard to analytics page confirmed working
-

8. Historical Order Data Issue

- Older orders in Firebase did not originally store timestamps
 - This caused incomplete analytics reporting
 - Manual fix suggested:
 - o Add createdAt fields to old records
 - o Use random but realistic dates for testing historical analytics
-

9. Order Sorting Improvements

- With timestamps added, orders can be sorted by newest first
- Older orders can later move into order history views
- Team recognised timestamps are important for reporting and UX

10. Vendor Orders Status Flow

- Current issue:
 - o New orders arrive with no status selected
 - Proposed fix:
 - o Automatically default new orders to **Pending**
 - Prevents vendors forgetting to update first status manually
-

11. Orders Page Enhancements

- Suggested adding dropdown controls directly on orders page
 - Vendors should update status without returning to dashboard
 - Possible statuses:
 - o Pending
 - o In Progress
 - o Ready
-

12. Payment System Progress

- Keanu confirmed payment work still in progress
 - Planned to create a smaller PR immediately showing edited files
 - Final payment PR expected after further polishing
-

13. PR Dependency Awareness

- Yusra's analytics work may depend on Shazmeen's open PR
 - Team noted members should pull latest changes after merges
 - Conflicts should be resolved quickly to avoid delays
-

14. Next Meeting Schedule

- Team agreed to meet in person after lecture the following day
 - Separate meeting with tutor/client to happen once availability is confirmed
-

Decisions Made

- Prepare strongest completed features for tutor/client review
 - Fix View Cart bug urgently
 - Use timestamps consistently for all future orders
 - Default new vendor orders to Pending status
 - Continue using smaller PRs for smoother merges
-

Next Steps

- Resolve View Cart browse page issue
 - Push vendor analytics PR updates
 - Finalise payment system progress PR
 - Add timestamps to future and older order records
 - Improve vendor orders page controls
 - Meet in person to prepare requirement-change session
-

Key Takeaway

This meeting focused heavily on technical stability and readiness for the upcoming requirement-change review. Bug fixing, merge management, analytics completion, and payment progress were prioritised so the team can present a solid working product in the next in-person session.
