

## **Meeting Minutes – 17 April 2026**

**Platform:** Online (Teams)

**Date:** 17 April 2026

**Time:** 18:00

---

### **Attendees**

Yusra

Phelelani

Mika

Shazmeen

---

### **Discussion Points**

#### **1. Pull Requests & Code Review**

- Two pull requests were pending review
  - One PR (Keanu's) failed CI tests and requires fixing
  - Issue identified with testing files not running correctly
  - Team agreed that PRs must be reviewed properly before approval
  - Emphasis on leaving meaningful review comments (e.g. failed checks, coverage issues)
- 

#### **2. Testing & Code Coverage**

- Current code coverage is approximately 55%
  - Goal is to increase coverage to at least 50% or higher
  - Many files were refactored into functions to improve testability
  - Some files had to be rewritten due to earlier issues
  - Testing remains a key priority before submission
- 

#### **3. Development Progress**

- New files created for order functionality:
  - orders.html

- orders.js
  - Order system design discussed:
    - Orders contain menu item IDs
    - Include order status (e.g. waiting, ready)
    - Include user ID
  - Team confirmed that the current structure is sufficient for now
- 

#### **4. Database & System Design**

- Orders table/collection was introduced
  - Discussion around fields required for orders:
    - Menu items (array of IDs)
    - Order status
    - User ID
  - Vendor linkage and tracking logic considered
  - No major changes required to the current design
- 

#### **5. Git Workflow & Merge Conflicts**

- Risk of merge conflicts identified due to multiple contributors editing similar files
  - Some files (e.g. database.js, vendor dashboard) may overlap
  - Suggested solutions:
    - Use git stash before switching branches
    - Pull latest changes before starting work
    - Check other branches before making changes
  - Team agreed to be more cautious with overlapping work
- 

#### **6. Branching & Naming Conventions**

- Branch names should match issue titles for consistency
- PR titles and linked issues must align

- Inconsistencies were noted and should be avoided going forward
- 

## **7. Deployment**

- A Vercel deployment link was created
  - Some users received a “dangerous site” warning
  - Deployment needs to be reviewed and validated
- 

## **8. Task Coordination**

- Team discussed timing of PR completion:
    - Aim to complete feature work by Saturday
    - Reserve Sunday for testing and fixing coverage
  - Members can continue working on features in parallel
  - Coordination required to avoid blocking others
- 

## **9. Documentation**

- Documentation has been uploaded to OneDrive for review
  - Team members must check and suggest improvements
  - Sprint Review and Retrospective will be completed at the end
  - Daily Scrum will be compiled from all meetings
- 

## **10. Questions for Tutor**

The following questions were identified for clarification:

- Whether Sprint 2 requires new user stories or cumulative total
  - Payment system implementation requirements
  - Number of UML diagrams required
  - Documentation submission format (Markdown vs PDF)
- 

## **11. Deadlines & Planning**

- Team discussed sprint deadlines and workload
  - Extension request by class representative noted, but unlikely to be approved
  - UML diagrams are required for the upcoming submission
  - Focus remains on completing core functionality on time
- 

### **Decisions Made**

- Prioritise fixing failed PRs before merging
  - Improve branch naming consistency
  - Continue parallel development while managing conflicts
  - Allocate Sunday primarily for testing and coverage improvements
  - Review and refine deployment setup
- 

### **Next Steps**

- Fix failed CI tests and update PRs
- Complete outstanding feature development
- Improve code coverage to acceptable level
- Review and merge pull requests
- Finalise documentation
- Clarify outstanding questions with tutor
- Prepare UML diagrams
