Sprint Three

Sprint Planning

Sprint Goal:

Extend CampusBites by implementing advanced ordering functionality, payment integration, vendor/admin management features, analytics, and usability improvements while preparing the platform for final refinement and presentation readiness.

1. Product Backlog (Initial Items)

The following features were identified during Sprint 3 planning discussions:

- Payment system integration
 - Order timestamps
 - Cancel order & refunds
 - Vendor analytics
 - Admin analytics
 - Vendor/customer profile pages
 - Browse-page refinements
 - Reviews & ratings
 - Featured vendors improvements
 - Notifications
 - Admin moderation workflow
 - For You / recommendations page
 - Mobile responsiveness improvements
-

2. Selected Sprint Backlog Items (Final Confirmed Stories)

Feature	Priority	Reason
Payment System Integration	High	Core Sprint 3 deliverable
Cancel Order	High	Critical order-management feature
Vendor Analytics Dashboard	High	Required vendor business insight
Admin Menu Management	High	Vendor moderation and quality control
Vendor & Customer Profiles	Medium	Improves usability and account management
Refunds	High	Core Sprint 3 deliverable

3. Sprint Story Amendments

During Sprint 3 development, the team revised several originally planned stories based on:

- Technical complexity
- Payment-system integration requirements
- External UX feedback
- Sprint time constraints
- Changing refinement priorities

The following changes were agreed upon throughout Sprint 3 meetings:

Reclassified Stories

- Order timestamps were later treated as a refinement supporting analytics and order management rather than a standalone feature
 - Reviews & ratings were postponed as future enhancements
 - Notifications were moved to Sprint 4 planning
 - “For You” recommendations became lower priority due to payment and analytics complexity
-

4. User Stories

User Story 12: Payment System Integration

As a customer, I want to securely pay for my order online so that I can complete purchases directly through the platform.

Acceptance Criteria

- Given a customer has items in their cart, when they proceed to checkout and payment succeeds, then the order should be created successfully
 - Given a payment is completed successfully, when the transaction finishes, then the customer should receive payment confirmation
 - Given a payment fails, when the transaction is unsuccessful, then the order should not be processed
 - Given a user is not a customer, when they attempt to checkout, then access to payment and ordering functionality should be denied
-

User Story 13: Cancel Order

As a customer, I want to cancel my pending order so that I can stop an order before preparation begins.

Acceptance Criteria

- Given an order status is "Pending", when the customer selects cancel order, then the order status should update to "Cancelled"
 - Given an order status is no longer "Pending", when the customer attempts to cancel the order, then cancellation should be blocked
 - Given an order has been cancelled, when the customer views their orders, then updated order feedback should be displayed
-

User Story 14: Vendor Analytics Dashboard

As a vendor, I want to view an analytics dashboard so that I can monitor business performance and order activity.

Acceptance Criteria

- Given a vendor accesses the analytics page, when the page loads, then vendor-specific order statistics should be displayed

- Given vendor sales data exists, when analytics are calculated, then total revenue should display correctly
 - Given a vendor selects a date filter, when the filter is applied, then analytics results should update dynamically
 - Given orders contain timestamps, when analytics calculations are performed, then results should remain accurate
-

User Story 15: Admin Menu Management & Moderation

As an admin, I want to review and approve or suspend menu items submitted by vendors, so that only appropriate and high-quality items appear on the browse page, and I can provide feedback explaining my decision.

Acceptance Criteria

- Given a vendor submits a menu item, when the item enters the system, then it should require admin approval before appearing publicly
 - Given an admin approves a menu item, when approval is confirmed, then the item should become publicly visible
 - Given an admin rejects a menu item, when the rejection is submitted, then feedback or a rejection reason should be recorded
 - Given a user is not an admin, when they attempt to access moderation features, then access should be denied
-

User Story 16: Vendor & Customer Profile Management

As a customer/vendor, I want to manage my account information through a profile page so that I can update and maintain my personal or business details.

Acceptance Criteria

- Given a user accesses their profile page, when the page loads, then their account information should display correctly
- Given a user updates their profile details, when the changes are saved, then the updated information should persist successfully
- Given a vendor accesses their profile, when vendor-specific details are available, then those details should be manageable

- Given a user refreshes the page, when profile information reloads, then the updated details should remain visible
-

User Story 17: Refund Handling

As a customer, I want to be refunded when I cancel my order so that I do not lose money for orders I no longer want.

Acceptance Criteria

- Given I am logged in as a customer, when I cancel my order before it has been prepared, then I should receive a full refund for the amount I paid
 - Given my order has already started being prepared, when I attempt to cancel the order, then I should be informed whether I qualify for a refund or not
 - Given my cancellation is successful, when the refund is processed, then I should receive a confirmation notification or message
 - Given I have cancelled an order, when I view my order history, then the order status should display as “Cancelled”
 - Given a refund has been issued, when I check the order details, then I should be able to see the refunded amount and refund status
 - Given there is an error processing the refund, when the cancellation is attempted, then I should receive an error message explaining that the refund could not be completed at that time
-

5. Task Breakdown

Payment System

- Integrate payment gateway
 - Add payment confirmation flow
 - Restrict ordering to customers only
 - Handle failed payments
 - Validate vendor payout information
 - Test payment flow on deployed environment
-

Cancel Order & Refunds

- Add cancel-order functionality
 - Restrict cancellation after preparation begins
 - Update order statuses dynamically
 - Trigger refund workflow for pending orders
 - Improve order-feedback UI
-

Vendor Analytics

- Build analytics dashboard
 - Calculate vendor revenue
 - Display total orders
 - Add filtering by date range
 - Connect analytics to timestamps
 - Improve analytics layout and readability
-

Admin Menu Management

- Create admin moderation page
- Approve/reject vendor menu items
- Add moderation comments/reasons

- Restrict non-admin access
 - Improve vendor moderation workflow
-

Profile Management

- Create customer profile page
 - Create vendor profile page
 - Add editable account information
 - Add vendor settings management
 - Ensure profile data persists correctly
-

6. Task Allocation

Member Task

Keanu	Payment System Integration & Refund Handling
Mika	Cancel Order
Yusra	Vendor Analytics Dashboard
Phelelani	Admin Menu Management & Moderation
Shazmeen	Vendor & Customer Profile Management
Team	Integration, testing, refinements, and deployment

7. Estimation & Prioritisation

- Payment integration & order flow → Highest priority (P0)
 - Vendor analytics & moderation → High priority (P0)
 - Profiles & usability improvements → Medium priority (P1)
 - Reviews, notifications, and recommendation features → Lower priority / postponed (P2)
-

8. Definition of Done

A task is complete when:

- Feature works end-to-end
 - Integrated with Firebase and deployment environment
 - Pull request submitted
 - Code reviewed and merged
 - Basic testing completed
 - Validation and error handling included
 - UI functionality works on desktop and mobile layouts
-

9. Risks & Considerations

- Payment-system complexity
 - Deployment-domain restrictions
 - Refund and payout handling challenges
 - Merge conflicts on shared frontend files
 - Code coverage requirements
 - Heavy academic workload during Sprint 3
 - Maintaining updated UML and documentation
-

10. Sprint Deliverables

By the end of Sprint 3, the team aims to deliver:

- Functional payment workflow
- Cancel-order and refund functionality
- Vendor analytics dashboard
- Admin menu moderation system
- Vendor/customer profile management
- Improved order management and timestamps
- Final presentation-ready deployment
