

Sprint Review – Sprint 3

CampusBites

Sprint 3 focused primarily on completing the major functional components of the CampusBites platform and preparing the system for final presentation readiness. During this sprint, the team successfully implemented and refined several high-priority features including payment integration, vendor analytics, notifications, email verification, vendor order management, profile management, and UI redesigns. Significant progress was also made toward improving overall usability, navigation consistency, and customer/vendor workflows.

During the sprint review session, the tutor was generally pleased with the progress and functionality demonstrated by the team. The system was viewed as significantly more polished and feature-complete compared to earlier demonstrations. The tutor particularly responded positively to the updated homepage design, improved navigation system, vendor workflows, and the growing professionalism of the platform's UI and functionality.

Several implemented features demonstrated during the review included:

- Cash-payment functionality
- Vendor order management improvements
- Email verification
- Vendor analytics
- Recommended vendors functionality
- Multi-vendor discovery page
- Updated customer and vendor profile pages
- Improved role-based navigation
- PWA support and deployment readiness

The tutor also provided refinement-oriented feedback intended to improve the final quality and professionalism of the platform before submission. Feedback and suggestions included:

- Investigating Azure hosting and real payment-processing possibilities
- Adding clearer feedback when customers add items to their cart
- Improving the platform's brand identity and logo presentation
- Making the UI appear less "medical" and more food-oriented

- Adding additional styling and visual polish to improve the user experience
- Extending UML diagrams and documentation
- Providing proof of team meetings and sprint activities

Overall, Sprint 3 was considered highly successful. The team achieved the majority of its planned functionality while also improving the overall appearance, usability, and professionalism of the CampusBites platform. The final sprint will now focus on polish, stability, refinement, testing, and final presentation readiness before submission.
