

Code Blooded

Sprint Three

Meeting 02 – Sprint Planning

Sprint Goal:

Finalize the core functionality of CampusBites by improving payment workflows, vendor management, analytics, and account security while refining usability, navigation, and overall presentation readiness for final submission.

1. Product Backlog (Initial Items)

The following features were identified:

- Admin analytics
 - Cash payment workflow
 - Vendor order history
 - Email verification
 - Notifications
 - Vendor discovery improvements
 - Recommended vendors
 - Profile management refinements
 - Navigation redesign
 - Analytics export functionality
 - Review moderation
 - UI/branding refinements
 - PWA refinements
 - Loading screen improvements
-

2. Selected Sprint Backlog Items

Feature	Priority	Reason
Admin Analytics	High	Important admin functionality and presentation feature
Cash Payments	High	Core ordering/payment functionality
Vendor Order History	High	Improves vendor workflow and order management
Email Verification	High	Improves authentication and account security
Notifications	Medium	Improves user feedback and usability
Navigation & UI Refinements	Medium	Improves professionalism and user experience

3. User Stories

User Story 12: Admin Analytics

As an admin, I want to view analytics data so that I can monitor overall platform performance and vendor activity.

Acceptance Criteria

- Given I access the admin analytics page, when the page loads, then I should see platform statistics
 - Given vendor and order data exists, when analytics are calculated, then totals should display correctly
 - Given analytics are displayed, when I filter by dates, then results should update dynamically
 - Given I am not an admin, when I attempt to access analytics, then access should be denied
-

User Story 13: Cash Payments

As a customer, I want to be able to pay my orders with cash

Acceptance Criteria

- Given I am logged in as a customer, when I cart , then I should have a pay with cash option
 - Given I am a vendor, when I view my orders, then I should see when a customer wants to pay by cash
 - Given I am a vendor , when a customer cash pays for their order, then I should be able to set the order as paid
-

User Story 14: Vendor Order History

As a vendor, I want to view previous orders so that I can manage historical transactions and completed orders.

Acceptance Criteria

- Given I access vendor order history, when the page loads, then completed orders should display correctly
 - Given multiple orders exist, when I apply filters, then the results should update dynamically
 - Given active orders are completed, when the order workflow finishes, then they should move into order history
 - Given order history is displayed, when I refresh the page, then the data should persist correctly
-

User Story 15: Email Verification

As a user, I want to verify my email address so that I can securely access and use my CampusBites account.

Acceptance Criteria

- Given I register a new account, when I provide a valid email address, then a verification email should be sent to me
 - Given I receive a verification email, when I click the verification link, then my account should be marked as verified
 - Given my email is not verified, when I try to log in or access restricted features, then I should be prompted to verify my email first
 - Given my email is already verified, when I log in, then I should have full access to the platform
-

4. Task Breakdown

◆ Admin Analytics

- Create admin analytics dashboard
 - Display vendor/order statistics
 - Add date filtering functionality
 - Calculate total platform revenue
 - Add analytics export support (CSV/PDF)
 - Restrict analytics access to admin users
-

◆ Cash Payments

- Add cash-payment option during checkout
 - Update checkout/payment workflow
 - Ensure vendors can confirm payment received
 - Restrict collected status before payment confirmation
 - Display payment method within vendor orders
-

◆ **Vendor Order History**

- Create vendor order-history section
 - Move completed orders into history/archive
 - Add filters for dates and statuses
 - Improve order sorting and organization
 - Ensure order-history persistence after refresh
-

◆ **Email Verification**

- Add email-verification logic to registration flow
 - Send Firebase verification emails
 - Restrict unverified account access
 - Display verification success/error feedback
 - Create and refine verification-related tests
-

◆ **Notifications & Refinements**

- Add cart-feedback notifications
 - Add order-status notifications
 - Improve navigation consistency
 - Refine mobile responsiveness
 - Improve branding and UI consistency
 - Continue PWA refinements
-

5. Estimation & Prioritisation

- Payment workflows and order management → Highest priority (P0)
 - Analytics and authentication → High priority (P0)
 - Notifications and refinements → Medium priority (P1)
 - UI polish and branding → Medium priority (P1)
-

6. Definition of Done

A task is complete when:

- Feature works end-to-end
 - Integrated with Firebase
 - Code pushed through PR
 - Reviewed and merged successfully
 - Basic testing completed
 - UI functionality works correctly on desktop and mobile
-

7. Risks & Considerations

- Payment integration limitations on hosted environments
 - Firebase testing complexity
 - Merge conflicts on shared UI files
 - Time constraints due to university workload
 - Code coverage and Jest testing difficulties
 - Deployment inconsistencies between environments
-

8. Sprint Deliverables

By the end of Sprint 3, the team aims to deliver:

- Functional admin analytics dashboard
- Working cash-payment workflow
- Vendor order-history system
- Email-verification functionality
- Improved notifications and cart feedback
- Refined navigation and UI consistency
- Finalized presentation-ready deployment
